Art Unit: 1773

1. The following is an examiner's statement of reasons for allowance: the closest prior art, Kaneda et al, teaches a semiconductor device and a method of producing the semiconductor device whereby an anisotropic conductive adhesive film cast from a solvent is used to adhere a semiconductor to a substrate and electrically connect opposing electrodes by heating and pressurizing the adhesive film therebetween wherein the anisotropic conductive adhesive comprises an insulating thermoplastic resin, thermosetting resin, or mixture of both, and conductive particles in an amount preferably of 0.1 to 30% by volume with respect to the matrix resin material in order to ensure anisotropic conductivity. Kaneda et al do not teach or render obvious that the resin material of the anisotropic adhesive is a cyclic structure-containing thermoplastic polymer selected from the group consisting of (a) a cycloolefin polymer and (b) an aromatic-condensed polymer having a repeating unit of an aromatic ring in its main chain, and having a number average molecular weight of 1,000 to 500,000, and having a functional group as instantly claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Monique R Jackson whose telephone number is 571-272-1508. The examiner can normally be reached on Mondays-Thursdays, 8:00AM-4:30PM.
